The 55R613G T-9ASM is a rotary compressor used in air conditioners. It is a 12,000 BTU compressor that operates on 220 volts and 50 hertz. It is manufactured by KTN, a Chinese company that has been in the air conditioning and refrigeration business for over 15 years.

The 55R613G T-9ASM is a hermetic motor compressor, which means that the motor and compressor are sealed in a single unit. This design helps to protect the

compressor from the elements and makes it more energy efficient.

The compressor uses R22 refrigerant, which is a common refrigerant used in air conditioners. However, R22 is being phased out in many countries due to its environmental impact. KTN also offers compressors that use R410A refrigerant, which is a more environmentally friendly refrigerant.

The 55R613G T-9ASM is a widely used compressor that can be found in a variety of air conditioners. It is a reliable and efficient compressor that is a good choice for many applications.
