What is CNC Machining?

Private Picture Copyright: WWW.MBSM.PRO

CNC machining can be defined as a process in which pre-programmed computer

software dictates the movement of factory machinery and tools. As a result, manufacturers can produce parts in less time, reduce waste and eliminate the risk of human error.

This manufacturing process is used to control a wide variety of complex machinery, which will be discussed in this article. Essentially, CNC machining makes it possible for three-dimensional cutting to be completed by following one set of prompts.

The Different Types of CNC Machines

CNC machines are designed to manufacture a wide variety of items. As such, there are several different types of commonly used CNC machines.

It's important to know that these are not your average machines. They require the skills of a trained professional to be able to produce high quality commercial products. All of the following machines use G-code, which is the language that a CNC machine understands. Each type of CNC machine caters to a specific purpose.

CNC Milling Machine

One of the most common types of CNC machines, a CNC mill utilizes computer controls to cut various materials. Mills can translate specific programs of numbers and letters in order to move the spindle in various ways.

Many mills use what is known as G-code, which, as mentioned, is a standardized programming language recognized by most CNC machines. A CNC mill can have a wide array of functions, such as face milling, shoulder milling, tapping, drilling and turning. Most CNC mills come in three to six-axis configurations.

A CNC mill is very large compared to other tools and can be quite costly. Some CNC milling machine manufacturers include Okuma, HAAS and DMG Mori.

CNC Lathe

A lathe is a CNC machine that functions to cut work pieces as they are rotated. CNC lathes can make precise cuts quickly by using various tools.

These CNC machines are quite effective in the precision they offer compared to manual lathes. They often have fewer axes than CNC milling machines, and are therefore smaller in size and more compact.

CNC lathes come with similar controls to those of CNC mills and can read both G-code and other proprietary programming languages. Some of the most common CNC lathe machine manufacturers include HAAS, Mori Seiki and Okuma. The framework of CNC lathes is similar to manual lathes.

Pompe De Relevage Climatisation

Category: Solutions,Technologie

written by www.mbsm.pro | 23 January 2024

Private Picture Copyright : WWW.MBSM.PRO

L'humidité de l'air se condense sur les surfaces froides. C'est notamment ce qui arrive avec les systèmes de climatisation. Il faut donc évacuer les « condensats ». Le plus simple et le plus fiable est de pouvoir les évacuer sous l'action de leur propre poids, de manière dite gravitaire. Mais ce n'est pas toujours possible.

Il faut alors utiliser une pompe de relevage de condensats qui va permettre d'aspirer l'eau et de la refouler vers une canalisation d'évacuation des eaux usées. Celle-ci peut dès lors se trouver au-dessus du bac de condensats du climatiseur. Il existe trois types de pompes pour les relevages de condensats de climatisation : à piston oscillant, centrifuges (débits importants) ou péristaltiques (la compression d'un tube par un galet aspire les condensats). Généralement, pour les appareils courant, une pompe à piston suffit. C'est aussi le système le plus compact et discret.
