Table of characteristics of compressors for refrigerators

Category: Chaud&Froid,compressor

written by www.mbsm.pro | 10 February 2024

If it is necessary to replace the compressor in the refrigerator, it is necessary to choose the right analogue.

Compressors are designed for different types of application, namely, they are classified according to the temperature range.

LBP (Low Suction Pressure) indicates a range of low evaporating temperatures, typically -10°C to -35°C or even -45°C , these compressors are designed for use in freezers or fridge freezers.

MBP (Medium Suction Pressure) indicates a range of average evaporating

temperatures, typically -20°C to 0°C . These compressors are used in refrigerated cabinets, milk coolers, ice makers and water dispensers.

HBP (High Suction Pressure) indicates a range of high evaporating temperatures, typically -5°C to $+15^{\circ}\text{C}$, and is used, for example, in dryers and standalone liquid chillers. The additional T indicates a “tropical” compressor design. This means that the compressor is designed for high ambient temperatures and can operate with unstable power supplies.

Also, when repairing refrigerators, it is important to take into account the peculiarities of the length and diameter of the capillary tube.

Capillary tubes play an important role. It is always necessary to correctly select the diameter and length of the capillary; their values cannot be changed arbitrarily.

About capillary tube problems.

One of the most common problems is clogging of the capillary tubes, they must be replaced with the same length and diameter.

If you install a capillary tube with a larger diameter than the one originally installed, the system will work, but the cooling efficiency will be lower.

Typically, capillaries are installed in compressors as follows:

The 73W compressors are fitted with a 0.63 mm (0.025 in) capillary tube.

92W compressors are fitted with a 0.71 mm (0.028 in) capillary tube.

The 122W compressors are fitted with a 0.71 mm (0.028 in) capillary tube.

184W compressors are fitted with a 0.8 mm (0.031 in) capillary tube.

245W compressors are fitted with a 0.1 mm (0.039 in) capillary tube.

The 368W compressors are fitted with a 1.4 mm (0.055 in) capillary tube.

Capillary tube fitting errors ...

Capillary tube parameters – inner diameter and length. In order for the capillary tube to match the capacity of the refrigeration system and the freon flow rate, which is determined by the piston volume, the diameter changes the freon flow rate.

For example, changing the diameter from 0.63 to 0.71 mm means that increasing the diameter by 0.127 mm doubles the freon flux. In addition, the longer the capillary tube, the slower the flow, and conversely, the shorter the length, the greater the flow.

For example, if you replace the capillary tube without taking into account the old section, what happens?

The first case: a smaller diameter or a longer length, this means a large resistance to the flow of freon inside the capillary tube, which leads to a shortage of freon in the evaporator, so the inlet pressure decreases and the superheat increases. The pressure in the condenser or receiver increases, the efficiency of the compressor decreases, its temperature rises, and overload may occur.

The second case: larger diameter or shorter length, which means little resistance to the flow of Freon inside the capillary tube, which increases the flow, and this causes high suction pressure, low superheating and the risk of liquid returning to the compressor inlet. At the same time, the liquid in the condenser easily passes through the capillary tube, causing a lower discharge

pressure. This reduces the compression ratio of the piston, and over time the compressor can be damaged due to the overflow (through the discharge valve) of liquid freon from the condenser to the piston area during the compressor standstill.

Below is a table of characteristics of compressors for refrigerators:

Application Deep Freezer	MA88LAEP
Fridge Compressor – Capacity	410 – 450 liters
Displacement	8.8
Cooling Capacity	235 (kcal/h), 273W, 933 (Btu/h), 0.367HP
Input Power	227W
COP W/W	1.2
EER Btu/Wh	4.11
Motor type	CSIR-Relay
Starting Device (PTC)	QL2-5-55
Motor Protector (OLP)	4TM314TFB
(Capacitor) Starting/ Surge Voltage	50 / 275
(OIL) Viscosity cst/ Qty(cc)	22/220
Cooling type	FC
Compressor Height	177mm

Net Weight

9.3 kg.
