## Généralités

### Généralités

Les cartouches-fusible HPC des classes de fonctionnement gG et gL protègent les appareils électriques des sur charges et des courts-circuits. Elles sont destinées

avant tout à la protection des circuits électriques basse tension. Ces classes de fonctionnement gG et gL impliquent la coupure en toute sécurité de tout courant capable de faire fondre le fusible.

FOURTH EDITION

# PRACTICAL ELECTRONICS FOR INVENTORS

PictureS Mbsm Dot Pro : [www.mbsm.pro](http://www.mbsm.pro)

## Practical Electronics for Inventors, Fourth Edition

by: Paul Scherz, Dr. Simon Monk

Abstract: A fully updated, no-nonsense guide to electronics. Advance your electronics knowledge and gain the skills necessary to develop and construct your own functioning gadgets. Written by a pair of experienced engineers and dedicated hobbyists, Practical Electronics for Inventors, Fourth Edition, lays out the essentials and provides step-by-step instructions, schematics, and illustrations. Discover how to select the right components, design and build circuits, use microcontrollers and ICs, work with the latest software tools, and test and tweak your creations. This easy-to-follow book features new instruction on programmable logic, semiconductors, operational amplifiers, voltage regulators, power supplies, digital electronics, and more. Coverage includes:

- Resistors, capacitors, inductors, and transformers
- Diodes, transistors, and integrated circuits
- Optoelectronics, solar cells, and phototransistors
- Sensors, GPS modules, and touch screens
- Op amps, regulators, and power supplies
- Digital electronics, LCDs, and logic gates
- Microcontrollers and prototyping platforms
- Combinational and sequential programmable logic
- DC motors, RC servos, and stepper motors
- Microphones, audio amps, and speakers
- Modular electronics and prototypes

## Book Details

Title: Practical Electronics for Inventors, Fourth Edition

Publisher: McGraw-Hill Education: New York, Chicago, San Francisco, Athens, London, Madrid, Mexico City, Milan, New Delhi, Singapore, Sydney, Toronto

Copyright / Pub. Date: 2016 McGraw-Hill Education

ISBN: 9781259587542

### Authors:

Paul Scherz is a Systems Operation Manager who received his B.S. in physics from the University of Wisconsin. He is an inventor/hobbyist in electronics, an area he grew to appreciate through his experience at the University's Department of Nuclear Engineering and Engineering Physics and Department of Plasma Physics. Dr. Simon Monk has a bachelor's degree in cybernetics and computer science and a Ph.D. in software engineering. He spent several years as an academic before he returned to industry, co-founding the mobile software company Momote Ltd. He has been an active electronics hobbyist since his early teens and is a full-time writer on hobby electronics and open-source hardware. Dr. Monk is author of numerous electronics books, including Programming Arduino, Hacking Electronics, and Programming the Raspberry Pi.

Description: A fully updated, no-nonsense guide to electronics. Advance your electronics knowledge and gain the skills necessary to develop and construct your own functioning gadgets. Written by a pair of experienced engineers and dedicated hobbyists, Practical Electronics for Inventors, Fourth Edition, lays out the essentials and provides step-by-step instructions, schematics, and illustrations. Discover how to select the right components, design and build circuits, use microcontrollers and ICs, work with the latest software tools, and test and tweak your creations. This easy-to-follow book features new instruction on programmable logic, semiconductors, operational amplifiers, voltage regulators, power supplies, digital electronics, and more. Coverage includes:

- Resistors, capacitors, inductors, and transformers
- Diodes, transistors, and integrated circuits
- Optoelectronics, solar cells, and phototransistors
- Sensors, GPS modules, and touch screens
- Op amps, regulators, and power supplies
- Digital electronics, LCDs, and logic gates
- Microcontrollers and prototyping platforms
- Combinational and sequential programmable logic
- DC motors, RC servos, and stepper motors
- Microphones, audio amps, and speakers

Modular electronics and prototypes

### Table of Contents

- A. ABOUT THE AUTHORS
- B. PREFACE
- C. ACKNOWLEDGMENTS
1. Introduction to Electronics
2. Theory
3. Basic Electronic Circuit Components
4. Semiconductors
5. Optoelectronics
6. Sensors
7. Hands-on Electronics
8. Operational Amplifiers
9. Filters
10. Oscillators and Timers

- 11. Voltage Regulators and Power Supplies
- 12. Digital Electronics
- 13. Microcontrollers
- 14. Programmable Logic
- 15. Motors
- 16. Audio Electronics
- 17. Modular Electronics
- A. Power Distribution and Home Wiring
- B. Error Analysis
- C. Useful Facts and Formulas
- Tools & Media
- figure (1 036)
- table (64)
- Expanded Table of Contents
- A. ABOUT THE AUTHORS
- PREFACE PRELIMINARIES
- ABOUT THE TECHNICAL EDITORS
- B. PREFACE
- PREFACE PRELIMINARIES
- Notes about the Fourth Edition
- C. ACKNOWLEDGMENTS
- 1. Introduction to Electronics
- CHAPTER PRELIMINARIES
- 2. Theory
- CHAPTER PRELIMINARIES
- Theory of Electronics
- Electric Current
- Voltage
- A Microscopic View of Conduction (for Those Who Are Interested)
- Resistance, Resistivity, Conductivity
- Insulators, Conductors, and Semiconductors
- Heat and Power
- Thermal Heat Conduction and Thermal Resistance
- Wire Gauges
- Grounds
- Electric Circuits
- Ohm's Law and Resistors
- Voltage and Current Sources
- Measuring Voltage, Current, and Resistance
- Combining Batteries
- Open and Short Circuits
- Kirchhoff's Laws
- Superposition Theorem
- Thevenin's and Norton's Theorems
- AC Circuits
- AC and Resistors, RMS Voltage, and Current
- Mains Power
- Capacitors
- Inductors
- Modeling Complex Circuits

Complex Numbers

Circuit with Sinusoidal Sources

Power in AC Circuits (Apparent Power, Real Power, Reactive Power)

Thevenin's Theorem in AC Form

Resonant Circuits

Lecture on Decibels

Input and Output Impedance

Two-Port Networks and Filters

Transient Circuits

Circuits with Periodic Nonsinusoidal Sources

Nonperiodic Sources

SPIICE

3. Basic Electronic Circuit Components

CHAPTER PRELIMINARIES

Wires, Cables, and Connectors

Batteries

Switches

Relays

Resistors

Capacitors

Inductors

Transformers

Fuses and Circuit Breakers

4. Semiconductors

CHAPTER PRELIMINARIES

Semiconductor Technology

Diodes

Transistors

Thyristors

Transient Voltage Suppressors

Integrated Circuits

5. Optoelectronics

CHAPTER PRELIMINARIES

A Little Lecture on Photons

Lamps

Light-Emitting Diodes

Photoresistors

Photodiodes

Solar Cells

Phototransistors

Photothyristors

Optoisolators

Optical Fiber

6. Sensors

CHAPTER PRELIMINARIES

General Principles

Temperature

Proximity and Touch

Movement, Force, and Pressure

Chemical

Light, Radiation, Magnetism, and Sound

GPS

7. Hands-on Electronics

CHAPTER PRELIMINARIES

Safety

Constructing Circuits

Multimeters

Oscilloscopes

The Electronics Laboratory

8. Operational Amplifiers

CHAPTER PRELIMINARIES

Operational Amplifier Water Analogy

How Op Amps Work (The “Cop-Out” Explanation)

Theory

Negative Feedback

Positive Feedback

Real Kinds of Op Amps

Op Amp Specifications

Powering Op Amps

Some Practical Notes

Voltage and Current Offset Compensation

Frequency Compensation

Comparators

Comparators with Hysteresis

Using Single-Supply Comparators

Window Comparator

Voltage-Level Indicator

Instrumentation Amplifiers

Applications

9. Filters

CHAPTER PRELIMINARIES

Things to Know Before You Start Designing Filters

Basic Filters

Passive Low-Pass Filter Design

A Note on Filter Types

Passive High-Pass Filter Design

Passive Bandpass Filter Design

Passive Notch Filter Design

Active Filter Design

Integrated Filter Circuits

10. Oscillators and Timers

CHAPTER PRELIMINARIES

RC Relaxation Oscillators

The 555 Timer IC

Voltage-Controlled Oscillators

Wien-Bridge and Twin-T Oscillators

LC Oscillators (Sinusoidal Oscillators)

Crystal Oscillators

Microcontroller Oscillators

11. Voltage Regulators and Power Supplies

## CHAPTER PRELIMINARIES

Voltage-Regulator ICs

A Quick Look at a Few Regulator Applications

The Transformer

Rectifier Packages

A Few Simple Power Supplies

Technical Points about Ripple Reduction

Loose Ends

Switching Regulator Supplies (Switchers)

Switch-Mode Power Supplies (SMPS)

Kinds of Commercial Power Supply Packages

Power Supply Construction

12. Digital Electronics

## CHAPTER PRELIMINARIES

The Basics of Digital Electronics

Logic Gates

Combinational Devices

Logic Families

Powering and Testing Logic ICs

Sequential Logic

Counter ICs

Shift Registers

Analog/Digital Interfacing

Displays

Memory Devices

13. Microcontrollers

## CHAPTER PRELIMINARIES

Basic Structure of a Microcontroller

Example Microcontrollers

Evaluation/Development Boards

Arduino

Interfacing with Microcontrollers

14. Programmable Logic

## CHAPTER PRELIMINARIES

Programmable Logic

FPGAs

ISE and the Elbert V2

The Elbert 2 Board

Downloads

Drawing Your FPGA Logic Design

Verilog

Describing Your FPGA Design in Verilog

Modular Design

Simulation

VHDL

15. Motors

## CHAPTER PRELIMINARIES

DC Continuous Motors

Speed Control of DC Motors

Directional Control of DC Motors

RC Servos  
Stepper Motors  
Kinds of Stepper Motors  
Driving Stepper Motors  
Controlling the Driver with a Translator  
A Final Word on Identifying Stepper Motors  
16. Audio Electronics  
CHAPTER PRELIMINARIES  
A Little Lecture on Sound  
Microphones  
Microphone Specifications  
Audio Amplifiers  
Preamplifiers  
Mixer Circuits  
A Note on Impedance Matching  
Speakers  
Crossover Networks  
Simple ICs Used to Drive Speakers  
Audible-Signal Devices  
Miscellaneous Audio Circuits  
17. Modular Electronics  
CHAPTER PRELIMINARIES  
There's an IC for It  
Breakout Boards and Modules  
Plug-and-Play Prototyping  
Open Source Hardware  
A. Power Distribution and Home Wiring  
APPENDIX PRELIMINARIES  
Power Distribution  
A Closer Look at Three-Phase Electricity  
Home Wiring  
Electricity in Other Countries  
B. Error Analysis  
APPENDIX PRELIMINARIES  
Absolute Error, Relative Error, and Percent Error  
Uncertainty Estimates  
C. Useful Facts and Formulas  
APPENDIX PRELIMINARIES  
Greek Alphabet  
Powers of 10 Unit Prefixes  
Linear Functions ( $y = mx + b$ )  
Quadratic Equation ( $y = ax^2 + bx + c$ )

# قصيدة بمناسبة اليوم العالمي للمرأة للشاعر التونسي منير بن صالح ميلاد

Category: News,Publicité,Web

written by mahdi miled | 25 November 2017

أعترف يا قلبي أنك تحب كل النساء  
أعترف أنك لست من الحمقى ولا من الجبناء  
ولست طاغوت دين يجالس السفهاء  
أنت يا قلبي تعشق جنس الطيبة والوفاء  
وتاجا من النور على رؤوس النبلاء  
نساء صنعن بأيديهن التاريخ وليئن النداء  
ورفعن راية المجد عالية في غياهب السماء  
سَأَعِيشُ رَغَمَ الدَّاءِ والأَعْدَاءِ كَالنَّسْرِ فوقَ القِمَّةِ الشَّمَاءِ  
أزنو إلى الشَّمْسِ المِضِيئَةِ..، هازئاً بالسُّحُبِ، والأمطارِ، والأنواءِ  
أعترف يا قلبي أنك تحب إهتزاز الثورة  
على صدور الشرفاء  
وأنَّ أُمَّيَّ هي مناضلة بل هي أجمل النساء...

## www.mbsm.pro , Contrôleur de température numérique / thermoélectrique / pour système frigorifique ou couveuse ,STC-200+ , STC-1000+

Category: Technologie

written by mahdi miled | 25 November 2017

PictureS Mbsm Dot Pro : [www.mbsm.pro](http://www.mbsm.pro)

Le contrôleur de température de STC-200+ est conçu avec l'arrangement séparé de menu d'utilisateur et de menu d'administrateur. Les options incluses dans cette unité sont alarmantes, chauffage, et modules de frigorification. Ce cooler de la température est applicable à tous les types d'entreposage au froid qui exige la température accrue. Il est également approprié au réfrigérateur de l'eau et à la machine de fruits de mer.

## Mbsm.pro , principe de fonctionnement d'un transistor

Category: Technologie

written by [www.mbsm.pro](http://www.mbsm.pro) | 25 November 2017

PictureS Mbsm Dot Pro : [www.mbsm.pro](http://www.mbsm.pro)

images.png (10 KB)

Description du transistor

Le transistor est un composant d'où sortent 3 fils électriques. Ils sont dénommés B (base), C (collecteur), et E (émetteur).

Voici un dessin du transistor BC 547, agrandi quatre fois :

Un tel transistor coûte de l'ordre de 10 FB dans les magasins de composants électronique.

Voici la représentation classique du transistor dans les schémas électroniques :

Le principe de fonctionnement

- Si on branche une source de tension entre les bornes C et E, le transistor ne laisse pas passer de courant (fig. 1).
- Par contre, entre B et E il y a un court-circuit. Si on veut faire passer un courant précis entre B et E, il faut utiliser une source de tension et une résistance (fig. 2).
- **Si** on envoie un courant de  $I_b$  ampères entre B et E, **alors** le transistor acceptera de laisser passer un courant de  $I_c = \beta \cdot I_b$  ampères entre C et E (fig. 3). Dans ce cas ci,  $\beta$  vaut de l'ordre de 100.

Les schémas électroniques correspondants aux dessins des figures 1, 2 et 3 sont représentés par les figures 4, 5 et 6 :

Note : Pour ceux qui voudraient essayer ces branchements : une seule pile de 9 Volts peut jouer le rôle des deux piles (fig. 7 et 8) :

Faites attention à la polarité : mettez bien le pôle positif et le pôle négatif de la pile au bon endroit. Le sens du courant est important pour un transistor. Le BC 547 est un transistor un peu faible pour allumer une lampe. Vous aurez peut-être intérêt à utiliser un transistor plus puissant, comme par exemple le BD 649. En voici un dessin, agrandi deux fois :

Au début, en faisant des erreurs de branchement ou en faisant dissiper une énergie trop importante au transistor, vous risquez fort d'en brûler quelques uns. C'est normal.

La raison pour laquelle on soustrait systématiquement 0,7 Volts de la tension  $U_{BE}$  est que les transistors bipolaires actuels contiennent une diode "parasite". La tension soustraite dépend du type de semiconducteur utilisé : 0,7 Volts pour le silicium, et 0,2 Volts pour le germanium.
